Stratégie des tests

PHPUnit: Tests

```
it("should create a commande", function() {
    $repository = new PDOCommandeRepository;
    $useCase = new CreateCommande($repository);
                                                        Tests:
                                                        Time:
    $commande = $useCase->execute([
        'title' => 'Mon titre',
        'content' => 'Mon contenu'
    ]);
    assertInstanceOf(Commande::class, $commande);
    assertEquals($commande, $repository->findOne($commande->uuid));
```

```
PASS Domain\Commande\tests\CreateCommandeTest

√ it should create a commande
PASS Domain\Commande\tests\PestTest
✓ it should work
```

2 passed

0.03s

Choix des techno, outils

Communication: Messenger, Drive, Teams

Langage: PHP

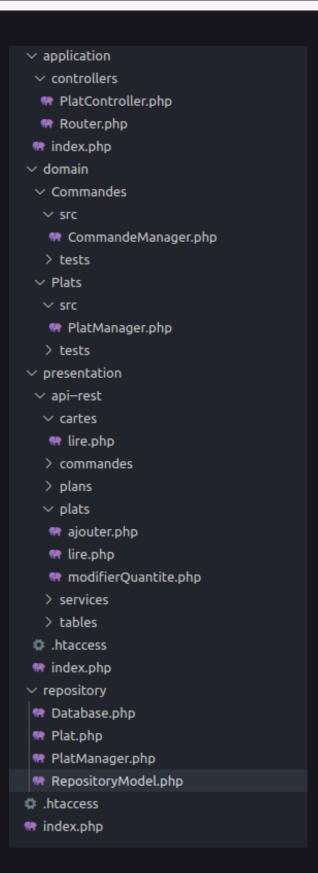

Tests: PHPUnit, Postman

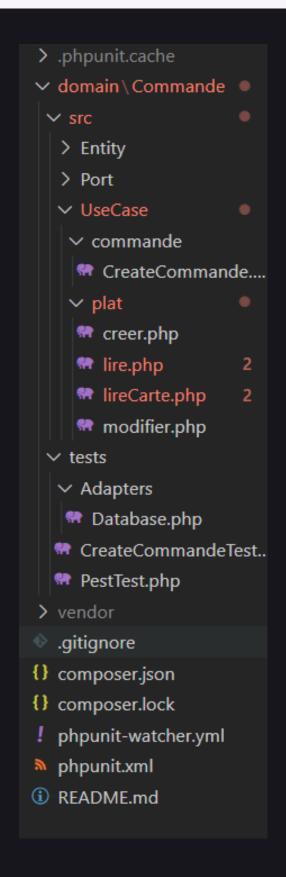

Base de donnée : SQL

Logiciel de dev & versionning : Visual Studio, Github

Problèmes rencontrés

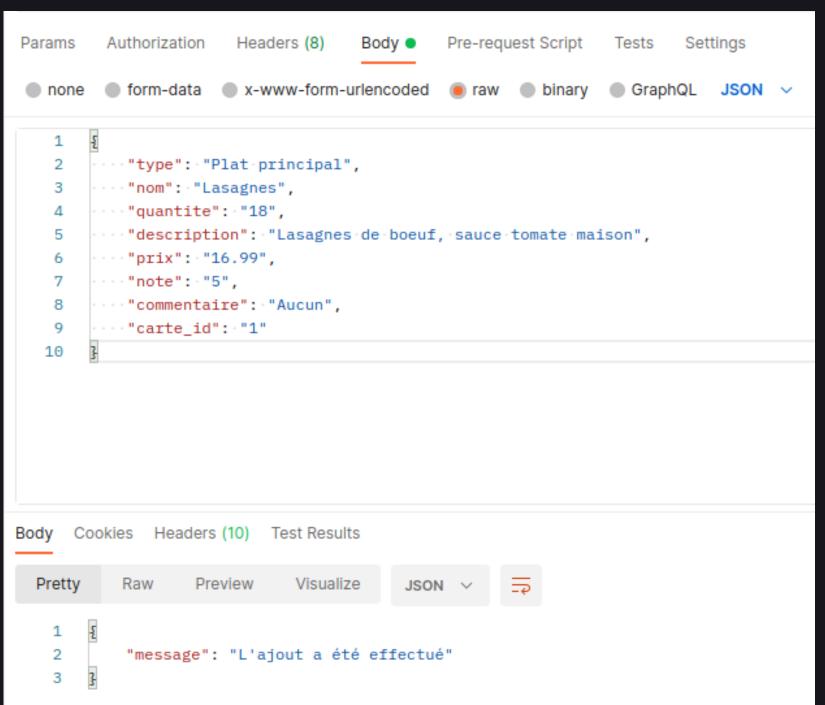

Postman: Ajout plat

```
>
```

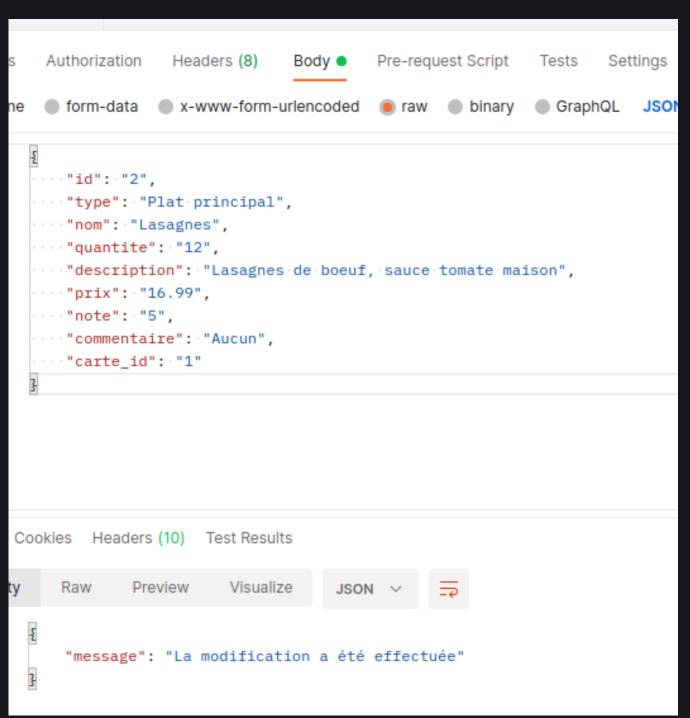

Postman: Mise à jour quantité

```
>
```

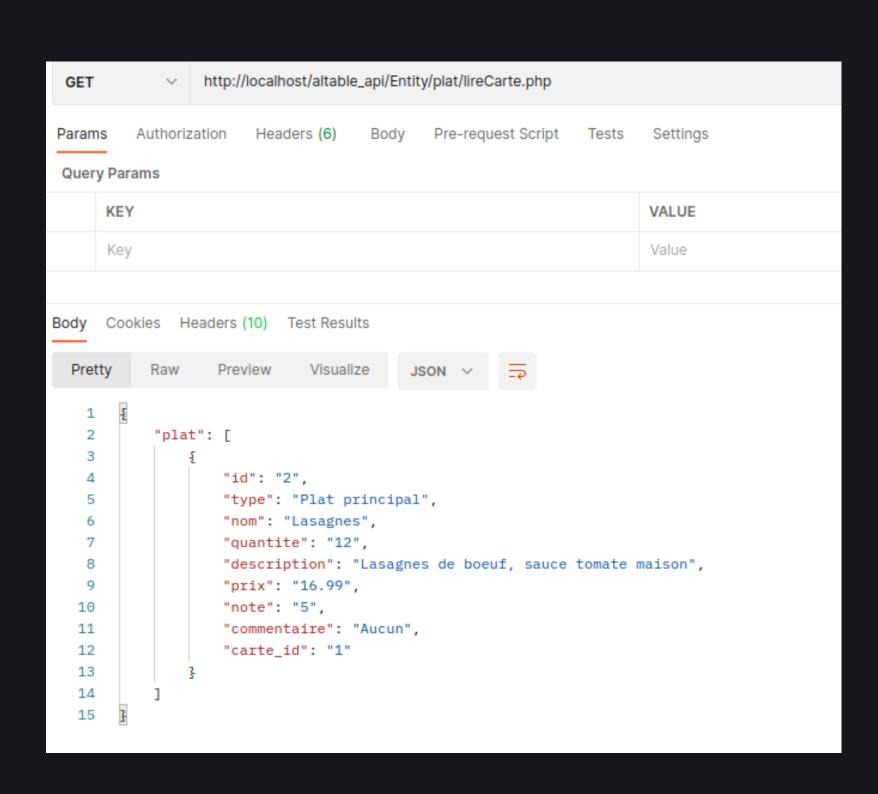

Postman: Récupération Carte & Plats

```
>
```

```
